

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Arkansas.

The secretary of the Arkansas State Board of Health reported by telegraph January 22 that 3 cases of meningitis had occurred at Morrilton, Conway County, since January 14.

Illinois.

Passed Asst. Surg. von Ezdorf reported by telegraph January 18 as follows: Cases of meningitis have occurred at Gale, Alexander County, since December 31. There have been 15 cases, with 10 deaths, 1 recovery, and 4 still under treatment. The last case developed January 9. The district within 2 miles of Gale has been placed under quarantine, with also a house quarantine of the cases. On the termination of cases the premises have been disinfected and the beds and clothing burned. One case was reported in Cairo on January 10 and died January 12. One case was reported at Tamaroa, Perry County, January 13.

Dr. von Ezdorf further reported January 20 that there were 2 new cases of meningitis notified at Gale January 19, and that an isolation hospital was to be established there.

Tennessee.

Surgeon R. H. von Ezdorf reported from Nashville January 16 that investigation showed that cerebrospinal meningitis was widely scattered in Dyer County, with some cases occurring at places which were inaccessible on account of flood conditions; the Dyer County health authorities had reported, for the period from the beginning of the epidemic to January 1, 58 cases and 34 deaths in addition to those previously reported for the same period; from January 1 to 15,

57 cases and 18 deaths were notified; very incomplete reports show that approximately 80 per cent of the cases occurred in negroes; the situation was not improved, and the measures advised by the State health authorities were being inadequately enforced; quarantine against Dyer County had been put into effect.

Lake County could not be reached directly on account of high water. From the beginning of the outbreak to January 15, 18 cases and 13 deaths had been reported in this county.

Dr. von Ezdorf further reported January 22 that cases of meningitis have been reported in Tennessee in the following counties: Dyer, Crockett, Lake, Obion, Lauderdale, Tipton, Gibson, Carroll, Davidson, Warren, Roane, Rhea, Lincoln, Hamilton, Polk, Williamson, and Hamblen.
